VELO / BUILD REFERENCE

Authentication screen handoff

Five account-entry screens · Voltage visual direction · iOS implementation notes

V1 product focus	**Running gait analysis and personalized corrective or strength exercises. Live in-ear coaching belongs to a later phase.**

Package includes the visual preview, local photo asset, editable screen specification, and this shareable build reference.

Flow and design system

Build the same five-screen account-entry flow shown in the HTML preview. The preview is a visual target; use native iOS layout and accessibility behavior in production.

PATH	SCREEN ORDER
Returning runner	Welcome → Log in → Existing account
New runner	Welcome → Sign up · email → Email entered → Finish signing up

Visual tokens

Graphite olive	#10140A	Main canvas
Deep moss	#354719	Secondary depth
Voltage lime	#C4F52A	Primary actions
Pale lime	#EDFF9A	Highlight
Text	#F7F5F0	Primary copy

Type: use the native Apple system sans-serif throughout. Headings are semibold/bold with restrained tight tracking; supporting text stays regular and comfortably spaced. The preview uses an Apple system font stack.

Image: the selected real runner photo is included locally. Apply full-bleed cover cropping, mild softness, and a dark graphite/forest scrim so the photo sets the mood while copy stays readable.

Buttons: Voltage lime with dark text for the primary action; translucent outlined treatment for secondary actions; recognizable Apple and Google sign-in treatments.

SCREEN 01

Welcome

Introduce Velo and make the two account routes obvious.

Content

“Know your stride. Build stronger miles.” Supporting copy: “Understand how you move. Get a gait analysis and strength work shaped around you.”

Interaction and layout

Sign up is primary; Log in is secondary. Both actions lead to their respective account paths. Keep the brand mark near the top safe area, left-align the message, and anchor the actions above the bottom safe area.

Visual reference: open the screen with the matching number in **velo-voltage-preview.html** in this handoff folder. The preview uses the same selected photo and Voltage styling.

SCREEN 02

Welcome back · log in

Give existing runners a direct route back to their saved assessments and movement history.

Content

Email address, password, Forgot password?, Log in, Continue with Apple, Continue with Google, and Create account.

Interaction and layout

Use keyboard-aware email and secure password inputs. Support system autofill and password managers. Password recovery opens the recovery flow. Show errors beside the relevant input or as a clear inline message. Provider buttons start native authorization.

Visual reference: open the screen with the matching number in **velo-voltage-preview.html** in this handoff folder. The preview uses the same selected photo and Voltage styling.

SCREEN 03

Sign up · email empty

Collect a new runner’s email address.

Content

Email field, disabled Continue, Privacy Policy and Terms links, Apple and Google sign-in, and an existing-account Log in link.

Interaction and layout

Continue stays disabled until the email is valid. Legal links must be separate tappable controls and lead to the final policy URLs.

Visual reference: open the screen with the matching number in **velo-voltage-preview.html** in this handoff folder. The preview uses the same selected photo and Voltage styling.

SCREEN 04

Sign up · email entered

Show the valid email state and allow progress.

Content

Same composition as Screen 3, with a valid email populated and Continue enabled.

Interaction and layout

Carry the entered email forward to Screen 5. The sample address in the preview is placeholder content.

Visual reference: open the screen with the matching number in **velo-voltage-preview.html** in this handoff folder. The preview uses the same selected photo and Voltage styling.

SCREEN 05

Finish signing up

Complete email-based account creation.

Content

First name, Create password, Repeat password, and Create account.

Interaction and layout

Carry email from Screen 4. Use secure password fields, apply the configured password policy, validate matching values, and provide inline feedback. On success, continue into Velo’s running onboarding flow.

Visual reference: open the screen with the matching number in **velo-voltage-preview.html** in this handoff folder. The preview uses the same selected photo and Voltage styling.

iOS dimensions and implementation

The mockup proportions are a 393 × 852 pt iPhone reference canvas. The app must adapt to each device’s actual bounds, safe areas, and text settings.

- **Safe areas:** keep brand, headings, fields, and controls clear of the status bar, Dynamic Island, and home indicator. Pin bottom actions relative to the safe area.
- **Tap areas:** every interactive control is at least 44 × 44 pt. Main buttons are 48–50 pt high; fields are 52 pt in the visual preview.
- **Text:** use SF system styles and Dynamic Type. Preview body copy is 15–16 pt and legal copy is 12 pt. Allow text to grow; do not clip it.
- **Scrolling:** use a scrollable form when content exceeds available height, especially with larger accessibility text or the keyboard open. Keep actions reachable.
- **Legibility:** preserve strong text contrast and keep the dark photo scrim behind content. Check the design in both light and dark appearance.
- **Input:** use email and password content types, secure text entry, visible focus states, and keyboard-safe spacing.
- **Native components:** use native iOS buttons and text fields for production. The HTML is a style and hierarchy reference, not a fixed-pixel implementation.

Connect before release

Authentication backend; Apple and Google OAuth configuration; password policy and recovery destination; Privacy Policy and Terms URLs; post-auth onboarding route; final error and validation copy. Replace the sample email and first name with user data.

Apple guidance: Accessibility · Buttons · Layout.

Selected image: The original Unsplash running-at-night photo is included in assets/velo-runner-night.jpg. Photographer details were not retained in the original preview; see assets/PHOTO_SOURCE.txt for source and license information.
